- REST APIs
- Firebase Auth
- Effective Communication
- JavaScript (ES6+)
- Vue Router
- Pinia
- LocalStorage
- Responsive Design

LANGUAGES

- English: Fluent
- Yoruba: Fluent

PROFILE SUMMARY

Junior Frontend Developer who enjoys building clean, modern web applications using Vue 3, Pinia, and Firebase. I focus on reusable component architecture, API integrations, and responsive UIs. I've built real projects (movie discovery, e-commerce frontend, weather app) that include authentication, state management, routing, and persistent storage. Prior administrative and remote support experience strengthened my attention to detail, communication, and ability to work independently. Open to junior, trainee, and remote frontend roles.

WORK EXPERIENCE

Elori Global Services   2023 - 2024
Administrative Support

- Provided administrative and operational support in a hybrid/remote environment.
- Managed digital records, documentation, and data entry with a focus on accuracy and organization.
- Supported daily workflows using Google Workspace and Microsoft Office; coordinated tasks and tracked progress.
- Communicated with team members and clients to ensure deliverables were completed on time.
- Demonstrated strong attention to detail, time management, and independent problem-solving.

PROJECTS

E-COMMERCE FRONTEND

- Built an e-commerce frontend with product listings, cart management, and checkout flow, using LocalStorage for cart persistence and order history with a focus on responsive UX..

MOVIE DISCOVERY APP

- Built a movie discovery app with routing, detailed movie pages, and user-specific favorites using Firebase Authentication, Firestore, and Pinia.

WEATHER APP

- Built a minimal weather app that fetches live data and uses Vue Suspense for loading states; watchers update UI reactively.
- Clean responsive UI and concise API handling.
